Docket No. 1232-4423US1

REMARKS

CLAIM STATUS

Claims 8-12 and 15-22 are pending and, as indicated in the Final Action dated January 28, 2004, are rejected. An Amendment Under 37 CFR §1.116 was filed on May 3, 2004. An Advisory Action dated May 20, 2004 was issued in response to the May 3, 2004 Amendment. A Request for Reconsideration was filed on July 26, 2004, in response to which a further Advisory Action, dated August 13, 2004 was issued.

The August 13, 2004 Advisory Action indicates that the Request for Reconsideration has been considered but does not place the application in condition for allowance. The Examiner states that the arguments toward the final rejection and previous advisory action (that of May 20) are not persuasive. Specifically, the Examiner asserts that "paragraph [0023] of the originally filed specification of the priority application does not teach or disclose the limitations 'a generating unit arranged to generat [sic] a Web page including the additional information to be accessed based on the URL and the Web page including additional information (image data)' added by the amendment (paper number 07); therefore the cited reference to Linden et al is avable [sic] as prior art against this application, rendering the rejection proper and the final rejection stands." (See "Continuation of 5" attached to Advisory Action.)

Applicants respectfully disagree.

Applicants respectfully note that the added limitation "a generating unit arranged to generate a Web page including the additional information to be accessed based on the URL and the Web page including the additional information (image data)" is clearly disclosed in the

Docket No. 1232-4423US1

Japanese priority application JP 09-035129, the certified translation of which was provided along with the May 3, 2004 Amendment.

Specifically, the operation in steps S107 and S108 described in paragraphs [0023] to [0025] of the originally filed specification of the priority application, discloses the operation of "a generating unit, arranged to generate a Web page including the additional information to be accessed based on the URL."

Thus, Applicants respectfully submit that the limitation indicated by the Examiner is in fact clearly described in the priority application JP 09-035129.

As a result, as explained in detail in the May 3, 2004 Amendment, the applied reference Linden (USP 6,360,254) is not available against the present application and the rejections of the pending claims under 35 USC, §§102(e) and 103 based on Linden, cannot stand and should be withdrawn.

CONCLUSION

In view of the foregoing, Applicants respectfully submit that the invention as recited in the pending claims is neither taught or suggested by, and thus neither anticipated by nor rendered obvious in view of, the available prior art, taken alone or in combination, and is patently distinct from the art of record and therefore allowable.

Applicants submit that the application is in condition for allowance which action is respectfully requested.

Applicants believe no fee nor further extension of time is required for this filing. However, should an additional extension of time be necessary to render this filing timely, such extension is hereby petitioned and the Commissioner is hereby authorized to charge any
